Valéron® Films

## Valéron® Films A special film with many mechanical properties for strong, high-tensile and tear-resistant packaging.

### Closed. Waterproof.

Valéron® Film keeps its promises: signed and sealed! It even outperforms the many mechanical properties of other films on the market. It is stronger and boasts higher tensile strength and tear resistance.

Its cross-laminated, multilayer structure, low elongation and high strength give you robust, leakproof packaging to protect your products.

On top of that, there's Valéron® Film's low transmission rate for water vapour (WVTR). This permits the Valéron® Film to create an ideal atmosphere which therefore preserves your valuable metal goods and products for longer. In a nutshell: strong, leakproof, closed packaging for all types of transport and packaging applications.

### Climate. Neutral.

Really cold. Warm, warmer and really hot. Valéron® Film is at home in any climate anywhere in the world. Its unique material properties mean Valéron® Film can be used in temperatures ranging from -40 °C to +60 °C.

Valéron® Film protects your goods and products not only against water, but also against many other substances and elements which can be encountered outdoors.

Thanks to Valéron® Film's high UV resistance, your goods and products are protected against damage at all times, even if stored outdoors for an extended period.

Quick. Easy. Safe.

### Fixation. Recyclable.

To keep Valéron® Film firmly in place, it can be attached quickly and easily using nails or staples to the storage or transport crates.

And, what makes Valéron® Film really special: it is 100% recyclable. For the sake of the environment.

### Deliverable. Units.

**Rolls:** as individual sheets, tubular, semi-tubular, tubular with side folds.

**Cut to size:** as individual sheets, flat pouches, side fold bags, covers and crate inlays.

## Watertight arguments. Point by point.

- Leakproof, strong and reusable packaging
- Reduced risk of corrosion
- No breeding habitat for insects
- Easy and secure fixation
- No deformation or elongation of the film
- Temperature range from -40 °C to +60 °C
- Films on rolls of widths up to 6,000 mm
- 100% recyclable
- Available in two colours: white and black
